PROJECT

- **Project Name: Trace and Track Role: Backend Developer**
Technology: Spring Boot, Commercetools
- **Project Description:** This is an extension, which integrate with commercetools, and help the customer to track delivery boy live location. I have created Api to get the shipping address by order ID. Also, when the order is out for delivery, customer will get an email and SMS notification with tracking link, to track the delivery boy live location and estimate time to reach the location. For email and SMS, I have uses AWS SMTP Server and SES.
- **Title of the Project: Online Doctor Appointment. Role: Software Developer**
Front End: HTML, CSS, JS. Back End: JAVA. Software Requirement: Web Browser-Mozilla Firefox Database: SQL
Project Description: Online Doctor appointment is a smart web application, this provides a registration and login for both doctors and patients. Both Doctors & patients can register by giving the necessary details like timings, fee, category, etc. This Web application provides online doctor's appointment in easy way and anywhere. This web application is easy to handle.
